

THE LATE MINOAN IIIB:1 SETTLEMENT

STRATIGRAPHY AND CATALOGUES

RUBBISH AREA SOUTHEAST

RUBBISH AREA SOUTHEAST (Figs. 53-56, Pls. 56b-c, 57)

In the Rubbish Area Southeast there appeared to be three main layers within the LM IIIB:1/IIIA:2 period. Five pits belong to the LM IIIB:1 phase, while the remaining two main layers (see below, pp. 221-234) seemed to be pure LM IIIA:2. The rubbish area probably continues westwards to *c.* 520 (Figs. 53-54), as already described in connection with the street, so what will be discussed here is only what is found east of the Venetian W1-015 (GSE I, 142-144). A general tendency for the rubbish area seems to be that it extends northwards during its period of existence.

20-Pit I (Figs. 55, 56b, c, d)

Small pit situated within the square 529.5-531.7/701.6-702.5 at levels 10.33 to 9.98. The pit was situated at a somewhat higher level than the floors of the Courtyard which, however, it did cut through. It contained a reddish soil with many stones. Both LM IIIA and LM IIIB sherds were noted. 4.345 kg of pottery were collected: 16% decorated, 90% kept and 1.9% inventoried. Shapes counted: 1 conical cup, 1 tripod cooking pot leg, 2 footed cups and 1 ladle.

20-Pit M (*Figs. 55, 56a, Pls. 20b:28, 21a:23, 57b*)

This pit, which was found partly below the Turkish Pit 2-4, is younger than the LM IIIA:2 pit into which it was dug (20-Pit L/AJ, cf. p. 224). It is situated within the area 526.5-529.9/700.8-704 and excavated at levels 9.38/9.80 to 8.91. The soil is red, soft, with small stones and in the eastern part little brown-greenish at top. The pottery contained some LM IIIB, but mainly LM IIIA with earlier pieces. 24.060 kg of pottery were collected: 14% decorated, 51% kept and 1.3% inventoried. Shapes counted (1984): 3 undecorated kylikes, 4 conical cups, 7 undecorated goblets, 2 tripod storage jar legs and 3 footed cups.
