

THE LATE MINOAN IIIB:1 SETTLEMENT

STRATIGRAPHY AND CATALOGUES

NORTH OF BUILDINGS 1 AND 2

NORTH OF BUILDINGS 1 and 2 (*Fig. 74, Pls. 72b-74*)

In the very northern part (Trs. 1, 2, 16 and 22) the LM IIIB:2 levels, with extremely few possible exceptions, went all the way down to the Middle Minoan layers. Actually, apart from a few small architectural remains from the LM IIIB:1 period (cf. below) nothing from the period MM II to LM IIIB:1 is preserved north of 718 and west of 525. The architectural fragments which may perhaps belong to another building, somewhat optimistically called “Building 4”, will be treated first. The remaining area north of Buildings 1 and 2 has been divided into four areas:

Area 1. Area of floor fragments, scattered in western and central part.

Area 2. North of Space G within 510-514/711-716.

Area 3. North of Room H within 514-521/712-717.

Area 4. West of Building 2 within 521-526/714-719.

In Area 2 east of 512 several deposits of the LM IIIB:1/IIIA period were likewise resting upon the MM layers while in Areas 3 and 4 LM II and/or LM IIIA:1 layers were found before we reached the MM strata or the LM IB destruction level.

“BUILDING 4” (*Fig. 74, Pls. 23a:9-11 (top), 72b-d, 73a*)

Within the area 513-514/718.5-721.2 we found very scanty evidence for the corner of a “building” or room in this area. Around 513.3/721 we found one stone set in a NE-SW direction. On the southeast side of this stone two floors were going up to it. In the area 513-514/718.5-719.1 were found three stones set in a NW-SE direction. These stones were facing the southwest and at the northeastern side was a pit from the LM IIIB:2 period. We think that the aforementioned stones belong to walls with the usual thickness of c. 0.55 and if so, it is possible to reconstruct the corner of a “building” with the outer west corner at c. 512/719.7 and the inner west corner at 512.8/719.8. The tops of the stones in the supposed walls were, in both instances, found at 10.61 which is higher than the two successive floors at 10.58 and 10.53 found inside the “building”. Supporting evidence for the supposed wall is found in *Pl. 23a:9* where stones of the same levels as the preserved are seen in the scarp in the exact position of the north-

western wall. Furthermore, a shift in levels (between 8 and 10) is noted exactly where the fragments of the floors were actually excavated in 2001. The corner would have been destroyed by the Turkish Wall W1-002 (cf. *GSE I*, 150). Outside the “building” on the southwestern side, a fragment of a floor was discovered at a much lower level at 10.27 (1/2-Floor 10) and this corresponds roughly to the bottom of the 1/2-Wall 3. The outside floor (1/2-Floor 10) continued below the LM IIIB:2 1-Wall 3 (*GSE III.2*, pl. 1) and would undoubtedly join the corresponding floors found south and east of this wall (1/3-Floor 3 and 3/4-Floor 5). A small isolated wall fragment Γ 5-Wall 1 found in 2005 within the square 517-518/718-719 (*Fig. 74*) probably belonged to the same “building”. The bottom level of the wall corresponds with those found further west. This wall will be presented in a forthcoming volume.

Towards the north and east “Building 4” was destroyed by the construction of the Rubbish Area North (cf. *GSE III*, 128-180), while the southeastern part would have been destroyed by the LM IIIB:2 constructions of Space D and Room A (cf. *GSE III*, 58-79).

Floor deposit (*Fig. 74*)

Only a tiny fragment of floors from this building was preserved. On the upper floor, 1/2-Floor 5 which could only be identified south of 720.2 we found a small floor deposit excavated at levels 10.65 to 10.58/10.55. It consisted of a rather compact reddish-brown soil with sporadic fragments of charcoal and mud-brick, few bones and shells, medium-sized pebbles and spots of yellow clay. Almost no stones over 0.010 in the upper part, but some larger stones at the bottom, probably fallen from the wall. In this deposit LM IIIB, LM IIIA and LM I pottery were noted. Weight is missing. Shapes counted: 1 pithos rim and 1 plain goblet.

BONES

A single bone from caprid.

In 1/2-Floor 5 (Fig. 74, Pl. 72c)

The actual floor was 0.02-5 thick and excavated at levels 10.58/10.55 to 10.53. It consisted of a rather compact, reddish-brown soil, with large pieces of charcoal up to 0.01, and minor fragments of mud-bricks, medium-sized pebbles, almost no stones. The underlying floor was used as floor-packing. In the floor only MM and LM I pottery was noted (nothing inventoried). 0.205 kg of pottery was collected: all undecorated and all kept. No shapes to be counted.

SMALL FINDS

01-M 011, *Pl. 252e:2*, 513.64/719.74 [507]

Painted plaster, three frgs. Light, slightly gritted lime plaster. Black spots from burning. Smooth, but worn surface with remains of light brown pigment. Mpd 0.01-02. Th. 0.007. LM I.

Above 1/2-Floor 4

Above the lower floor of “Building 4” in the northern part, north of 720.2, two small deposits were found which were of a slightly different texture. The northernmost deposit, excavated at levels 10.81 to 10.53, contained a compact, reddish-brown soil with small bits of charcoal, some larger stones up to 0.12, but not so many pebbles. Very few bones and shells, frequent fragments of mud-bricks and spots of yellow clay were found. The southernmost deposit, excavated at levels 10.74 to 10.55, contained a loose reddish-brown soil with medium-sized pebbles and no stones. Sporadic fragments of charcoal, and spots of yellow clay were found, but almost no sherds or fragments of mud-bricks. In both deposits LM I(A) and MM pottery were noted. 0.930 kg of pottery was collected: 1% decorated, 100% kept and 3.0% inventoried. No shapes to be counted.

POTTERY

MM III/LM IA

01-P 0339, **Plate**; 01-P 0340, **Open vessel**.

BONES

Two identified bones from *Sus* and caprid.

In 1/2-Floor 4 (Fig. 74, Pl. 72d)

The lower floor in “Building 4” was 0.02 thick and excavated at levels from 10.55/10.53 to 10.53/10.51. It consisted of a compact, light reddish-brown soil, with some pieces of charcoal and a few stones, some pebbles, spots of yellow clay some up to 0.15 and small fragments of mud-bricks. In the floor only MM and LM I pottery were noted 0.560 kg of pottery was collected: 1% decorated, 100% kept and 5.0% inventoried. Shapes counted: 1 conical cup and 1 plain cup.

POTTERY

MM III/LM I

01-P 0478, **Open vessel**; 01-P 0479, **Cup**.

Comments: Even though the floor and the deposits above contained nothing later than LM I it must be dated LM IIIB since pottery of this date was found in the levelling deposit sealed below the floor.

Levelling deposit

Below the lower floor we came upon a *c.* 0.25 thick layer which was found on top of the MM deposits. It was excavated at levels from 10.53/10.51 to 10.23/10.29 and it consisted of a rather compact reddish-brown sandy soil with light brown spots and frequent inclusions of small pieces of charcoal. Medium pebbles and medium stones up to 0.15-20, sporadic stones above 0.20. The colour of the layer is slightly lighter in the southern part. The soil becomes softer going downwards. No spots of yellow clay, no fragments of mud-bricks and only a few bones. The pottery in this deposit was mainly EM III/MM I, but it also contained some sherds of LM I and LM IIIB. 9.325 kg of pottery were collected: 18% decorated, 100% kept and 1.1% inventoried. Shapes counted: 1 egg-cup, 1 plain cup, 1 plain ladle.

BONES

Few bones from adult *Ovis*, *Sus* and *Bos* and a single bone from caprid.

Comments: This deposit is probably the same as that found further south below 1/2-Floor 10 and perhaps north of Room H (see below p. 187).

AREA 1. AREA OF FLOOR FRAGMENTS (Fig. 74, Pl. 73a-c)

Within the area 510-514/714-719 four fragments of beaten earth floors were found (3-Floor SW, 1/3-Floor 3, 1/2-Floor 10 and 3/4-Floor 5). If they are, indeed from the same floor it was sloping towards the southwest from 10.27 to 9.97. In the central part the floor was dug through by the large Geometric pit found in the former Courtyard F (see *GSE* I, 220-228), while the eastern part was cut by LM IIIB:2 wall 3-Wall 3 of Courtyard F (see *GSE* III, 83). One further small floor fragment (2/4-Floor 13) was discovered around 517/717.5 at 10.18. In the following these floor fragments will be treated together.

Deposits above the floors (Fig. 74)

A few small deposits were stratigraphically younger than the floors. The soil in these deposits are described as red clay-like; brown-reddish, hard-packed without pebbles; brown, soft with some small pieces of charcoal. All deposits contained LM IIIB and LM IIIA pottery. 4.400 kg of pottery were collected: 10% decorated, 78% kept and 1.0% inventoried. Shapes noted (1970): decorated and undecorated jugs, decorated and undecorated cups and bowls.

On the floors (Fig. 74, Pl. 73a-c)

The soil above the floors are described as (1/3 Floor 3, *Pl. 73c*): reddish-brown yellowish, very soft with occasional pieces of lime, small pieces of charcoal and small stones; (3/4-Floor 5, *Pl. 73b*): light brown, hard-packed with pieces of charcoal and plaster; 3-Floor SW: red earth. Above 1/2-Floor 10 (*Pl. 73a*) a thin deposit was excavated at levels 10.29 to 10.27. It consisted of a rather compact yellowish-brown soil, with bits of charcoal and few stones of smaller size. In three deposits LM IIIA was noted and possibly some LM IIIB pottery, while above 1/2-Floor 10 LM I and very little LM III were noted. 1.575 kg of pottery was collected: 12% decorated, 84% kept and 3.5% inventoried. Shapes were not counted.

All floor fragments, 1/3-Floor 3 (*Pl. 73c*), 3/4-Floor 5 (*Pl. 73b*), 3-Floor SW and 1/2-Floor 10 (*Pl. 73a*), were excavated separately. The floors consisted of reddish-brown, hard-packed clay with small pieces of charcoal, small pebbles, mud-brick pieces and many sherds. 1/2-Floor 10 was 0.08 thick and it consisted of a compact, light reddish-brown soil with bits of charcoal, sporadic sherds, a single fragment of mud-brick, medium-sized pebbles and a few stones up to 0.09. In all floors LM IIIA and LM IIIB were noted and a few earlier pieces. The inventoried sherds are from 1/3-Floor 3 and 1/2-Floor 10. 2.875 kg of pottery were collected: 10% decorated, 83% kept and 3.9% inventoried. Shapes were not counted.

One more tiny floor fragment was discovered within 516.8-517/717.3-717.6. The level of the floor at 10.18 seems to indicate that it belongs with the other scattered floor fragments in the area north of the buildings rather than within “Building 4”. The floor was constructed upon a LM IIIA:2 dump and was covered by the same layer that covered the dump (cf. below p. 190). The floor was 0.02-5 thick and excavated at levels from 10.18 to 10.16. It was a beaten earth floor which consisted of hard brown soil with bits of charcoal and pottery. No floor-packing. Only few sherds dated LM IIIA/B:1. 0.160 kg of pottery was collected: 13% decorated, 100% kept and 9.1% inventoried. No shapes to be counted.

Below the floors (Fig. 74)

Only two deposits of the period were stratified below the floors. One was 3/4-Pit A, situated below 3/4-Floor 5 within the square 513.7-514.3/715.5-716 at levels 10.05/10.11 to 9.96. The soil in the pit was dark brown loose with stones, pieces of charcoal and pieces of plaster. The pottery was mainly LM IIIA with a few earlier pieces. The other was found below 1/2-Floor 10 where a levelling deposit was excavated at levels 10.19 to 10.11. It consisted of a rather compact, reddish-brown soil with bits of charcoal and sherds, few fragments of mud-bricks, a few pebbles but almost no stones. The soil is very pure. The deposits contained LM IIIB, LM IIIA and few MM. 3.720 kg of pottery were collected: 8% decorated, 92% kept and 2.3% inventoried. Shapes counted (2001): 2 conical cups and 1 plain ladle.

Comments: The area of these floor fragments is so disturbed that it is not possible to determine their function, although it would be tempting to see them as an open space between Building 1 and “Building 4”. If so, it is unusual, in that outside spaces as a rule have many floor levels, cf., for example, the Courtyard.

AREA 2. NORTH OF SPACE G

In the whole area between Space G and 3/4-Floor 5 (Fig. 74) several deposits were excavated from levels immediately below that of the LM IIIB:2 floors and down to the MM layers at 10.01/9.63. From the soil descriptions it is obvious that very different soils were involved, although two layers were excavated in the larger part of the area. The two layers of the 1970 excavation, however, appeared in Scarp 3/14 (1978) to be one deposit excavated at levels from 10.12 to 9.66. Here the two layers of the 1970 excavation are kept separate.

Upper layer (Fig. 74)

The upper layer at levels *c.* 10.12 to *c.* 9.94 and in 3/14 to *c.* 9.66 consisted of various shades of brownish earth in which the pottery contained MM and LM I sherds but also pieces of LM IIIA and LM IIB:1 date. 16.750 kg of pottery were collected (only 1978): 7% decorated, 64% kept and 1.3% inventoried. Shapes noted (1970): decorated and undecorated kylix, amphora, decorated jug, decorated cup/bowl, krater and rhyton.

AREA 3. NORTH OF ROOM H (Fig. 74, Pls. 19a:15, 16 (top), 19, 25b:11 (bottom), 25c:12)

Upper layer

Apparently the major part of LM IIIB:2, Room A (*GSE III*, 62-79) was constructed upon a heavy rubbish deposit of the early LM IIIB:1 period. LM IIIB:1 Room H had also been constructed into this deposit (cf. above p. 97). It was excavated at levels from below the LM IIIB:2 floor of Room A at c. 10.40/10.23 down to c. 10.15/9.50. In the western part a red soil was noted. In the central part a layer of yellow soil was also noted while in the northeastern part was a soft red-brownish earth and in the very northern part a reddish-brown, hard soil with charcoal, small stones and bits of clay was noted. In all the baskets small amounts of LM IIIB were noted, mainly LM IIIA and a few also had EM, MM, LM I and LM II. 0.690 kg of pottery was collected (only 2001): 9% decorated, 100% kept and 6.1% inventoried. Shapes noted (1970 and 1971): large and small stirrup jars, decorated and undecorated kylikes, decorated and undecorated cups and bowls, amphorae, decorated and undecorated goblets, kraters, pyxis, decorated and undecorated jugs, footed cups, tripod cooking pot legs and rims of pithoi. Shapes counted (2001): 1 plain goblet, 1 plain ladle, 1 tripod leg.

Bronze hook?, almost completely pres. Broken into three pieces and mended. Green corrosion with red patches. Flatter and thicker at top, pointed and thinner at end. Hook/fish-hook or folded wire? L 0.026. W 0.003-5. Th. 0.001-5.
71-M 017, Pl. 253c:8, Δα/519 [568]
Bronze knife or dagger?, frgs. Two pieces, not fitting. Green corrosion with lighter green spots. One of pieces has two pierced holes that might be rivet-holes. Piece with holes: L 0.021. W 0.010. Other piece: L 0.018. W 0.012.
70-TC 014, Pls. 217, 253c:7, Γκ/516 [570]
Figurine, head and upper body. Fair condition. Chipped at back and on the head. Clay: light reddish-brown, semi-coarse. Light brown-buff slip. Greyish-brown, dull paint, slightly worn. Flattened head with projection at back. Polos? Applied eyes. Angular, irregular shape to upper body. Plastic arms folded over the chest. Fingerprints on head and part of body. Head covered with paint. Nose painted. Irregular, horiz. lines on front body. Fingers indicated through three short dashes on each hand. Broad neck band at front. Two diagonal lines forming an irregular V sign on the back. Fingerprints. The irregular shape of the figurine is probably due to the fact that it was applied to a throne or chariot. It is even possible that it has the arms of another figurine placed around it. Seems to be a Transitional figurine, locally made in the Mycenaean tradition. H 0.054. W of body 0.045. Th. of body 0.015. Analysed: local.

BONES

Few bones from young and adult caprid and from young *Sus* and a single bone from *Ovis*.

Comments: The remarkable thing about the finds is that among the small finds were many pieces of obsidian, and the absence of loom weights and terracotta spindle whorls should be noted. Also extremely few bones were noted.

The majority of the joins are "natural". There are some

joins to the southern part of the excavated area which is probably caused by a scatter of sherds in the LM IIIA:2/B:1 period and finally a few joins to the LM IIIB pits further east, probably with the same explanation as above. Furthermore, there are joins to the IIIB:2 rubbish area in the northern part.

Lower layer

Below the above deposit a small layer was excavated within 514-517/714-717 with a brownish-red soil and with the bottom level at c. 9.80 where both MM and LM IIIA:2 layers were found. The deposit contained LM IIIA and earlier pottery. Shapes noted (1970): decorated cups and bowls, decorated and undecorated kylikes and a pithos rim.

Comments: Much of the obsidian is probably from the MM layers. It is possible that this lower layer may belong with the LM IIIA:2 dump instead (see below, p. 243).

AREA 4. WEST OF BUILDING 2 (*Fig. 74, Pl. 73d*)

In the scarp between the trenches 5 and 10 (521-522/714-717) a large, deep deposit was excavated, Deposit 1 (*Pl. 22c:5*). This is probably the same as the neighbouring Deposit 2 found in Trench 10. Furthermore, a small deposit was found at the west corner of Building 2 called Deposit 3 and the fragment of a small isolated shallow pit within 520.3-521/723.5-724.

Deposit 1 (*Fig. 74, Pls. 20c:13, 22c:5*)

This deposit was stratified immediately below a Venetian pit and was excavated in the area from 713.5 up to the Venetian water tank in 521-522/716 at levels from 10.98/10.34 to 10.00/9.91. The soil is described as light brown-yellowish, hard, and with a high content of charcoal pieces. The pottery is mainly LM IIIB, little LM IIIA and some earlier pieces. One basket also contained a few later sherds – perhaps from the Venetian pit. Nothing was weighed. Of shapes 1 decorated kylix, 1 undecorated jug, 55 conical cups, 2 rim fragments of pithoi, 14 legs from tripod cooking pots, 6 undecorated goblets, 21 feet from tripod storage jars and 6 footed cups were counted.

Deposit 3 (*Fig. 74, Pls. 23b:11, 74*)

Just west and south of the supposed west corner of Building 2 (the reused LM I Wall of House III) a small deposit was found which may belong the LM IIIB:1/IIIA:2 period. It was situated in the area c. 524 to 526.5 and found at levels 10.75/10.72 to 10.65/10.56. It was a layer of fine brown soil with many small stones. Very little pottery of which the latest appeared to be LM IIIB. 3.790 kg of pottery were collected: 10% decorated, 94% kept and 0.4% inventoried. Counted shapes: 1 decorated and 1 undecorated kylix, 2 conical cups and 2 legs from tripod cooking pots.
