

THE LATE MINOAN IIIA:2 SETTLEMENT

STRATIGRAPHY AND CATALOGUES

RUBBISH AREA SOUTHEAST

Exactly as was the case in the LM IIIB:1 period the Rubbish Area Southeast stretched all the way from c. 521 and eastwards (Figs. 53-54), and was only interrupted by W1-015 and the deep Turkish pits, Pit 2-4, around 525.5-530 (GSE I, 105-109). In the western part of this area below the former street between Buildings 1 and 3 one large pit, 13-Pit K, was excavated. In the remaining area east of the Turkish pit two layers of pits/deposits could be distinguished within the LM IIIA:2 period: the upper and lower layer. 13-Pit K in all probability belongs with the lower layer, cf p. 229 and Fig. 54.

13-Pit K (Figs. 54, 81, 82a, Pls. 21b:23-24 and 29, 52c)

This rather large pit was discovered below the LM IIIB:1 street from c. 521 to 525.5 where it was cut by W1-015. The top level of the pit was from c. 9.26 with the bottom level at c. 8.73, thus being roughly 0.5 deep. In the southern part a thin upper layer was found, which in the northern part was excavated together with an overlying pit. In the upper layer the soil was medium soft, brown with some yellow, sand, and much charcoal. The soil in the lower part of the pit was reddish-brown, soft, a little sandy with much charcoal and many small stones. Stratigraphically the pit lies between LM IIIB:1 deposits (cf. above p. 115) and LM II/early IIIA:1 deposits. In all baskets LM IIIA was found as the latest pottery. Also a few LM II, LM I, MM and EM sherds were noted. 62.060 kg of pottery were collected: 17% decorated, 62% kept and 2.5% inventoried. Shapes were not counted.

BONES

Almost only bones from adult animals. The few from young animals were one *Ovis/Capra* and two *Sus*. The others were *Ovis* (at least three individuals), *Capra* one of which (ossa metacarpi) had marks from teeth of a beast (*Canis?*), *Ovis/Capra*, *Sus*, *Bos* and *Cervus*. Very high % (24) of *Bos*.

Comments: There are surprisingly few small finds from such a large pit but a lot of pottery and many bones were noted. The joins are almost exclusively to neighbouring LM IIIA:1 pits, probably all “natural”.

Upper layer

20-Pit G (Figs. 55, 56d, 83)

This pit is situated in the northern part within the square 531.7-533.2/701.3-702.4. It was partly underlying the LM IIIB:1 20-Pit H (cf. above p. 123 and *Fig. 55*) and the top was discovered at the level of the LM IIIB:1 phase 1 floors of the Courtyard while it had cut through the LM IIIA:2 phase floors. It was excavated at levels c. 10.02 to 9.58 and consisted of a dark brown to red, very sandy, fine and soft soil. It is probably a pure LM IIIA pit although the stratigraphic position would place it in the early LM IIIB:1 phase instead. 1.340 kg of pottery was collected: 7% decorated, 76% kept and 3.1% inventoried. Shapes counted: 1 conical cup.

20-Pit L/AJ (Figs. 83, 84a-b, *Pls. 20a:45, 24c:17-19, 21, 23, 29, 30*)

The major part of this pit is situated within the square 529.3-533/699-700.75, while the eastern part (Pit AJ) went all the way up to 702.4 (*Fig. 83*). One small deposit which stratigraphically fits here has been included with this pit (inv. no.: 84-P 1028, 1029, and TC 018). The pit is situated below LM IIIB:1 20-Pit H2 and 20-Pit AG and above LM IIIA:2 20/Pit K/N, and it was excavated at levels 9.73/9.82 to 9.39 and it consisted of a light brown, loose, sandy, fine soil with few stones at the upper part and more greyish and with some stones further down. Only LM IIIA with few earlier pieces noted. 86.230 kg of pottery were collected: 13% decorated, 88% kept and 1.9% inventoried. 20-Pit Q (Figs. 56a, 85, Pls. 20b:7 (bottom part), 84c)

In the western area partly underlying 20-Pit L (Fig. 56a) 20-Pit Q was found, with a thin deposit attached. This deposit stretched southwards til 699. Pit and deposit were excavated at levels 9.40 to 9.08. In the pit we had a dark brown to red soil with much charcoal, a little hard, while the soil in the deposit was red with pieces of charcoal. The pottery contained early LM IIIA with few earlier pieces. 13.785 kg of pottery were collected: 11% decorated, 88% kept and 1.9% inventoried. Shapes counted: 1 undecorated kylix, 3 undecorated bowls, 10 conical cups, 1 undecorated goblet, 2 tripod storage jar legs, 2 footed cups, 1 cooking dish rim and 1 lamp.
